

DTM TO LAUNCH CHEAT SHEET

OLD WAY

DIAGNOSTICS

```
_satellite.settings.isStaging
_satellite.publishDate
_satellite.buildDate
_satellite.getToolsByType('sc')[0].getS()
_satellite.isLinked(element)
_satellite.isOutboundLink(element)
```

DEBUGGING

```
_satellite.notify("message", [0-2])
_satellite.notify("message", 3)
_satellite.notify("message", 4)
_satellite.notify("message", 5)
```

COOKIES

```
_satellite.setCookie("name", "value")
_satellite.removeCookie("name")
_satellite.getCookie("name")
```

TEXT EDITING

```
_satellite.cleanText(str)
_satellite.getQueryParam("name")
_satellite.URI
_satellite.URL
```

NEW WAY

```
_satellite.buildInfo.environment
Use _satellite.buildInfo.buildDate
_satellite.buildInfo.buildDate
Obsolete
Use custom code
Use custom code
```

```
_satellite.logger.log("message")
_satellite.logger.info("message")
_satellite.logger.warn("message")
_satellite.logger.error("message")
```

```
_satellite.cookie.set("name", "value")
_satellite.cookie.remove("name")
_satellite.cookie.get("name")
```

```
str.replace(/\s+/g, ' ').trim()
Use Core > Query String Parameter Data Element
Use custom code
Use Core > Page Info > URL Data Element
```
